

315MHz 4 Channel Wireless RF Remote Control Kit with Receiver Module (Non-Locking Mode)

Slug: 4-channel-wireless-four-button-rf-remote-control-transceiver-module-mode-non-locking

TECHNICAL SPECIFICATIONS & SUMMARY

[RF Module] 315MHz 4 Channel Wireless RF Remote Control Kit with Receiver Module (Non-Locking Mode) 4 Channel RF Remote - 315MHz ASK Communication - 5V Receiver - Non-Locking Mode - Long Range Wireless Control The 315MHz 4 Channel Wireless RF Remote Control Kit is a reliable wireless control solution consisting of a 4-button RF transmitter and a super regenerative ASK receiver module. Operating at 315MHz, this kit is ideal for remote switching, automation, robotics, security systems, and DIY wireless control projects. The receiver module features four independent digital outputs (D0-D3) that correspond to the four buttons on the transmitter. When a button is pressed, the respective output pin goes HIGH, returning LOW immediately after the button is released. This Non-Locking (Momentary/Jog) operation makes the module perfect for applications requiring temporary switching such as electric door control, motor jogging, relay activation, and microcontroller interfacing. The receiver operates from a 5V DC supply and features a high-sensitivity ASK receiver with a
