

Gold AP-55 TPA3116D2 2x50W Bluetooth Stereo Digital Amplifier Board with USB, TF Card, FM & Remote

TECHNICAL SPECIFICATIONS & SUMMARY

[Amplifier Board] Gold AP-55 TPA3116D2 2x50W Bluetooth Stereo Digital Amplifier Board with USB, TF Card, FM & Remote

The Gold AP-55 is a compact Class-D stereo digital audio amplifier board based on the TPA3116D2 amplifier IC, designed for DIY Bluetooth speakers, home audio systems, portable speakers, bookshelf speakers, multimedia systems, and custom audio projects. Available product listings consistently identify the AP-55 as a dual-channel 50W + 50W amplifier, with a DC input range around 8-24V or 12-24V depending on the listing/version. The AP-55 combines the power amplifier with a multimedia player supporting Bluetooth 5.0, USB, TF/SD card, FM radio and AUX input. The Bluetooth device name is reported as GD-82EM, while the FM tuner covers 87.5-108.0MHz. It also includes an infrared remote control and a digital display for convenient operation. The TPA3116D2 Class-D amplifier provides efficient stereo amplification, making the board suitable for building compact but powerful audio systems. One detailed listing specifies support for 4 Ohm-8 Ohm speakers,
