

Insulation Filament Tape 50mm 50 meters

Slug: insulation-filament-tape-50mm-50-meters

TECHNICAL SPECIFICATIONS & SUMMARY

[Filament Tape] Tapes are used widely in all applications where you need adhesive to hold together two things, hold things in place, make them stick to a place, provide insulation against electricity, water, and other chemicals, etc. and the possibilities of the applications are infinite. We need a strong adhesive tape for applications where we need reliable adhesive application so this cross-filament tape is ideal for the applications with these requirements. This has cross-threaded filaments which increase the grip level of the tape on the object on which it has to be used so that it does not slip out and cause unnecessary loss of property. It has a width of 50mm so it is wide enough for most applications. Note: Image may vary in terms of color The Insulation Filament Tape (50mm x 50mtr) provides high-strength adhesion for electrical insulation, bundling, and securing applications. It features a durable filament-reinforced backing that provides excellent tensile strength and resistance to tearing. The tape adheres strongly to various surfaces, ensuring reliable performance even in demanding environments.
