

NEEY Active Balancer 24S 2A Lithium Battery Active Equalizer

slug: neey-active-balancer-24s-2a-lithium-battery-active-equalizer

TECHNICAL SPECIFICATIONS & SUMMARY

[Lithium Battery Protection Board] NEEY Active Balancer 24S 2A - 24S Lithium Battery Active Equalizer The NEEY Active Balancer 24S 2A is an advanced battery active balancing module designed to improve cell voltage consistency and overall battery pack performance. It transfers energy between individual cells to help maintain a more balanced battery pack, reducing cell voltage differences and improving usable capacity, battery life, and overall system stability. With support for a wide 1.8V-4.5V cell voltage range, this active balancer is suitable for various lithium battery chemistries including LiFePO , Lithium-ion, and LTO battery packs. It is particularly suitable for high-capacity battery systems used in electric vehicles, e-rickshaws, e-bikes, solar energy storage, and other battery applications. The product specification identifies this model as a 24S Active Balancer with 2A balancing current, making it suitable for battery packs with up to 24 cells connected in series. Key Features 24S Active Battery Balancer 2A balance current as specified for this model Active energy transfer between
